

IN THE SPECIFICATION

Please replace the fourth full paragraph on page 8 with the following paragraph.

In the invented procedure according to ~~Claim 2~~ the claims, the magazine fabricated in process step a. is used like a mold insert and serves as lateral boundary for the subsequent process steps for microcomponent production. Therefore, it is within the meaning of the invention to reuse an already fabricated magazine as a mold insert for microcomponent production. The design of the invented procedure for replicative production and magazine packaging of at least one microtechnically fabricated molded part as a magazine/molded part composite is characterized by the following process steps:

- a. ~~Replicative fabrication of~~ Fabricating at least one microstructured molded part using a prefabricated magazine;
- b. Simultaneously ~~[[D]]demolding of both~~ the magazine and the at least one microstructured molded part as one magazine/molded part composite~~[[.]]~~;
- c. removing the at least one microstructured molded part from the prefabricated magazine; and
- d. reusing the prefabricated magazine to fabricate at least one additional microstructured molded part.
